Atlanta, GA | +1 (703) 910-1468 | ravikiran.11@outlook.com | [Linkedin](#)

SUMMARY

Full Stack Java Developer with 3+ years of experience building Microservices, Distributed Systems, and cloud-native applications within banking and financial services environments. Skilled in Java, Spring Boot, AWS, Apache Kafka, Angular, and PostgreSQL, delivering scalable backend services, responsive web applications, and automated deployment pipelines. Experience improving application performance, optimizing data processing workflows, and supporting high-volume transaction systems in Agile environments.

TECHNICAL SKILLS

Programming Languages: Java (8–21), JavaScript, TypeScript, SQL, Python
Backend Technologies: Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, REST APIs, Microservices, Spring Cloud
Frontend Technologies: Angular, React.js, HTML5, CSS3, Bootstrap
Databases: PostgreSQL, MySQL, Oracle, MongoDB
Messaging & Integration: Apache Kafka, RabbitMQ, Event-Driven Architecture
Cloud & Infrastructure: AWS (EC2, S3, RDS, EKS, Lambda, API Gateway, IAM), Docker, Kubernetes
DevOps & Build Tools: Jenkins, GitHub Actions, Maven, Gradle, Git
Testing & Quality: JUnit 5, Mockito, Rest Assured, Postman, SonarQube
Security: Spring Security, JWT, OAuth2
Monitoring & Observability: ELK Stack, CloudWatch, Prometheus, Grafana
Architecture & Design: Distributed Systems, System Design, Design Patterns, Fault Tolerance, High Availability
Developer Tools: Swagger/OpenAPI, Jira, Confluence, GitHub Copilot
Methodologies: Agile Scrum, SDLC, CI/CD, DevSecOps

PROFESSIONAL EXPERIENCE

Full Stack Java Developer | JPMorgan Chase & Co. | USA **October 2025 – Present**

- Engineered Microservices supporting 2.3M+ daily financial transactions, reducing request latency by 420ms through asynchronous processing techniques.
- Crafted internal risk management dashboards using Angular and TypeScript, decreasing page load times by 3.6 seconds through optimized state management.
- Refined persistence layers using Hibernate, JPA, and PostgreSQL, reducing analytics job execution time by 31 seconds through indexing and batch-processing enhancements.
- Orchestrated containerized deployments on AWS using Docker, supporting fault-tolerant infrastructure across four real-time financial platforms.
- Streamlined CI/CD workflows with Jenkins, Maven, and automated testing, supporting 40+ production releases with consistent deployment quality.
- Mentored a team of five engineers through code reviews, sprint planning, and technical design discussions, accelerating feature delivery by 12 engineering days per sprint.
- Incorporated AI-driven fraud monitoring capabilities through REST APIs and service orchestration, strengthening transaction anomaly detection processes.

Full Stack Java Developer | Mphasis | India **January 2022 – February 2023**

- Delivered secure backend services processing 1.5M+ daily API requests for core banking applications using Java and Spring Boot.
- Established RESTful APIs within a Microservices Architecture, improving service scalability and communication efficiency.
- Produced transaction reporting dashboards using Angular, reducing manual reconciliation efforts by 20 minutes per session.
- Optimized database operations across datasets exceeding 120M records, lowering query execution time by 27 seconds through SQL and JDBC tuning.
- Standardized build and deployment processes across four environments using Jenkins, Maven, and Git-based workflows.
- Implemented predictive workload analysis models supporting proactive AWS resource scaling during peak transaction periods.

Full Stack Java Developer | Acuvate | India **November 2021 – January 2022**

- Constructed Spring Boot and REST API solutions that automated HR workflows for three enterprise clients, saving 18 operational hours per month.
- Modeled relational database schemas supporting 250K+ records while improving batch-processing response times by 29 seconds.
- Verified and maintained more than 160 API endpoints using Postman, ensuring reliable integrations and accurate payload processing.
- Eliminated critical backend defects, increasing application uptime by 40 hours per quarter and reducing recurring QA issues by 30%.

Java Developer Intern | Adani Group | India **August 2020 – October 2021**

- Modernized energy monitoring workflows, saving 22 engineering hours per week across five business units.
- Provisioned Spring Boot services processing 1.2M+ telemetry records while maintaining 99.9% data consistency.
- Revamped monitoring interfaces, reducing manual data-entry errors by more than 3,400 records during maintenance activities.
- Coordinated 15+ automated release cycles through testing and QA collaboration, maintaining a 100% deployment success rate.

PROJECTS

Impact of AI-Driven Machines and Systems on Workforce Dynamics in Business

- Formulated predictive analytics models that improved five business processes and saved more than 240 labor hours annually.
- Defined a Microservices implementation roadmap that accelerated project delivery by 15% and reduced ERP data-entry errors by 20%.
- Assessed AI-driven process optimization opportunities using statistical analysis and business workflow modeling.

EDUCATION

Master of Science in Computer Science **September 2023 – June 2025**
University of North America, Fairfax, Virginia
